                                                                                                                                                                                                                                                                                                                                                                       03-MAY-1999;
screening of genetic mutations, serotype, organism or strain identification, identification of mutation in BASB013 sequences, and as identification, identification of mutation in BASB013 sequences, and as components of arrays which are useful for diagnostic and prognostic components of arrays which are useful to produce antibodies, and as a purposes. The polypeptides can be used to produce antibodies, and as a target for the screening of antimicrobial drugs. The polypeptides can also be used in vaccine formulations, and to identify agonists and antagonists. The polypeptides, antibodies, agonists and antagonists antagonists are bacteristatic) are used for the treatment and prevention of which are bacteristatic) are used for the treatment and prevention of diseases including bacterial infection, otitis media in infants and
                                                                                                                  This sequence is a Moraxella catarrhalis BASB019 protein of the invention. The sequences can be used for diagnosis of disease, staging of disease, or determining response of an infectious organism to drugs. The polynucleotides may be used as a source for hybridisation probes, and for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 children, pneumonia in the elderly, sinusitis, nosocomial infections and invasive diseases, chronic otitis media with hearing loss, fluid accumulation in the middle ear, auditive nerve damage, delayed speech learning, infection of the upper respiratory tract and middle ear infection. They are also used in the prevention of adhesion of bacteria infection. They are also used in the prevention of adhesion of bacteria to eukaryotic matrix proteins on in-dwelling devices, or to extracellular proteins on wounds, and to thus prevent tissue damage and/or block the proteins on wounds, and to thus prevent tissue damage and/or block the proteins on of pathogenesis in infections initiated other than by normal progression of pathogenesis in infections instituted other than by the implantation of in-dwelling devices or by other surgical techniques, the implantation of in-dwelling devices or by other surgical techniques and it is no longer common to isolate M. catarrhalis strains that are and it is no longer common to isolate M. catarrhalis strains that are can be used screen for new antibacterial compounds that may target these resistant to standard antiblotics. The BASBO19 products of the invention can be used screen for new antibacterial compounds that may target these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      resistant bacteria.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC components of arrays which are useful for diagnostic and prognostic CC purposes. The polypeptides can be used to produce antibodies, and as a class of the screening of antimicrobial drugs. The polypeptides can cC also be used in vaccine formulations, and to identify agonists and components of the polypeptides, antibodies, and to identify agonists and components. The polypeptides antibodies, and to identify agonists and components of the polypeptides and to identify agonists and components. The polypeptides are used for the treatment and prevention of components of the components of the treatment and prevention of the interest of the treatment and prevention of the components. The polypeptides are used for the treatment and prevention of components of the upper useful and the hearing loss, fluid components, infection of the upper respiratory tract and middle ear components. They are also used in the prevention of adhesion of bacteria components on wounds, and to thus prevent tissue damage, delayed speech components of in-dwelling devices, or to extracellular components of in-dwelling devices or by other than by the implantation of in-dwelling devices or by other surgical techniques. The implantation of in-dwelling devices or by other surgical techniques. The frequency of Moraxella catarrhalis infections has risen dramatically, can be used screen for new antibacterial compounds that may target these cc and to standard antibiotics. The Basboll products of the invention cc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC identification, identification of mutation in BASB013 sequences, and as CC purposes. The polypeptides can be used to produce antibodies, and as a CC also be used in vaccine formulations, and to identify agonists and CC antagonists. The polypeptides, antibodies, agonists and antipolypeptides antibodies, and an according to the treatment and prevention of CC antagonists. The polypeptides, antibodies, agonists and antagonists and CC diseases including bacterial infection, other treatment and prevention of CC children, pneumonia in the elderly sinusitis, noscomial infections and CC invasive diseases, chronic otitis media with hearing loss, fluid CC invasive diseases, chronic otitis media with hearing loss, fluid CC invasive diseases, chronic otitis media with hearing loss, fluid CC infection. They are also used in the prevention of adhesion of bacteria CC infection. They are also used in the prevention of adhesion of bacteria CC extravolic matrix proteins on in-dwelling devices, or to extracellular CC proteins on wounds, and to thus prevent tissue damage and/or block the control of the upper respiratory tract and middle ear contain progression of pathogenesis in infections initiated other than by CC The frequency of Moraxella catarrhalis infections has risen dramatically, and it is no longer common to isolate M catarrhalis affections has risen dramatically,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

identification, identification of mutation in BASBO13 sequences, and as cc components of arrays which are useful for diagnostic and prognostic c purposes. The polypeptides can be used to produce antibodies, and as a cc purposes. The polypeptides can be used to produce antibodies, and as a cc also be used in vaccine formulations, and to identify agonists and cc antagonists. The polypeptides, antibodies, agonists and antagonists and cc antipodies, including bacterial infection, otilis media in infants and cc (which are bacteristatic) are used for the treatment and prevention of cc diseases including bacterial infection, otilis media in infants and cc diseases including bacterial infection, otilis media in infants and cc children, pneumonia in the elderly, sinusitis, nosocomial infections and cc invasive diseases, chronic otilis media with hearing loss, fluid cc infection in the middle ear, auditive nerve damage, delayed speech accumulation in the middle ear, auditive nerve damage, of the extracellular cc infection. They are also used in the prevention of adhesion of bacteria cc infection of mounds, and to thus prevent tissue damage and/or block the proteins on wounds, and to thus prevent tissue damage and/or block the cc proteins on wounds, and to thus prevent tissue damage and/or block the proteins on for adversing the surfacellular cc the implantation of in-dwelling devices or by other surgical techniques. The implantation of pathogenesis in infections has risen dramatically, created to standard antibiotics. The BASBO19 products of the invention cc resistant to standard antibiotics. The BASBO19 products of the invention content in the common to isolate M. catarrhals strains that are

This sequence is a fragment of a Moraxella catarrhalis BASHO19 protein of CC the invention. The sequences can be used for diagnosis of disease, conditions of disease, or determining response of an infectious organism to CC staging of disease, or determining response of an infectious organism to CC grobes, and for screening of genetic mutations, serotype, organism or CC probes, and for screening of genetic mutations, serotype, organism or CC grant and for screening of genetic mutations, serotype, organism or CC strain identification, identification of mutations, sequences, CC strain identification, identification for diagnostic and CC grognostic purposes. The polypeptides can be used to produce antibodies, CC prognostic purposes. The polypeptides can be used to produce antibodies, and as a target for the screening of antimicrobial drugs. The CC and as a target for the screening of antimicrobial drugs. The polypeptides and antagonists and antagonists. The polypeptides, antibodies, agonists and cCC antagonists (which are bacteristatic) are used for the treatment and CCC antagonists (which are bacteristatic) are used for the treatment and CCC infants and children maximum and in the olderly simulations, otitis media in greening of antipolic antipolic and antagonists and antagonists and antagonists and antagonists and antagonists and antagonists. The polypeptides, antibodies, agonists and antagonists and antagonists and antagonists and antagonists. The polypeptides antibodies, agonists and antagonists and antagonists and antagonists and antagonists and antagonists and antagonists. The polypeptides, antibodies, agonists and antagonists and a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Collules of Ollies General Series and polypoptides are used as research CC reagents and materials for discovery of treatments of and diagnostics for CC human diseases. Probes comprising BASBO20 nucleotide sequences can be constructed to conduct efficient screening of genetic mutations, CC serotype, taxonomic classification or identification. The polynucleotide compounds. The polypeptides and polynucleotides are used to block the CC initial physical interaction between a gram negative and/or gram positive bacteria to the mammalian host. The polynucleotides encoding certain CC bacteria to the mammalian host. The polynucleotides encoding certain CC mon variable regions of bacterial cell surface protein are used in CC experiments in animal models of infection with M.catarrhalis to conditify protein apitopes able to provoke a prophylactic or therapeutic composition comprising an antibody CC directed against BASBO20 can be used for treating humans with moscomial M. catarrhalis diseases such as sinusitis, otitis media and nosocomial
                                                                                                                                                                                                                                                                                                   Вþ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cc polypeptides can also be used in vaccine formulations, and to identify agonists and antagonists. The polypeptides, antibodies, agonists and can also have bacteristatic) are used for the treatment and prevention of diseases including bacterial infection, othits media in cc infections and invasive diseases, chronic otitis media with hearing loss, clid accumulation in the middle ear, auditive nerve damage, delayed cc speech learning, infection of the upper respiratory tract and middle ear confection. They are also used in the prevention of adhesion of bacteria cc infections on wounds, and to thus prevent tissue damage and/or block the cormal progression of pathogenesis in infections initiated other than by the implantation of in-dwelling devices or to extracellular cc the implantation of pathogenesis in infections initiated other than by the implantation of pathogenesis in infections initiated other than by created the implantation of pathogenesis in infections has risen dramatically. The frequency of Moraxella catarrhalis infections has risen dramatically, can be used in the prevent the BASBO19 products of the invention created and to standard antibiotics. The BASBO19 products of the invention catarrhalis strains that are
                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                03-MAY-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Moraxella catarrhalis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        and as components of arrays which are useful for diagnostic and prognostic purposes. The polypeptides can be used to produce antibodies, and as a target for the screening of antinicrobial drugs. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence is a fragment of a Moraxella catarrhalis BASB019 protein of the invention. The sequences can be used for diagnosis of disease, staging of disease, or determining response of an infectious organism to drugs. The polynucleotides may be used as a source for hybridisation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          11-NOV-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       probes, and for screening of genetic mutations, serotype, organism or strain identification, identification of mutation in BASB013 sequences,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example 8; Page 70; 101pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a peptide specific for a BASB020 CC protein, isolated from Moraxella catarrhalis, used in an example from CC the present invention. BASB020 polynucleotide fragments may be used as CC hybridisation probes for RNA. CDNA and genomic DNA to isolate full-length CC clones and genomic clones encoding BASB020 and to isolate cDNA and genomic Clones of other genes that have high sequence identity to BASB020 gene. CC reagents and materials for discovery of treatments of and diagnostics for CC clones of other genes that have high sequences of an diagnostics for CC constructed to conduct efficient screening of genetic mutations. CC sequences can be used in the discovery of genetic mutations. CC sequences can be used in the discovery and development of antibacterial compounds. The polypeptides and polynucleotides are used to block the initial physical interaction between a gram negative and/or gram positive bacteria to the mammalian host. The polynucleotides encoding certain cc unariable regions of bacterial cell surface protein are used in CC polynucleotide constructs which are useful for genetic immunisation CC experiments in animal models of infection with M.catarrhalis to cidentify protein epitopes able to provoke a prophylatetic or therapeutic commune response. A therapeutic composition comprising an antibody CC directed against BASB020 can be used for treating humans with
                                                                                                                                                                                                                                                                                                                                                                                     Matches

The inventiuseful in developmental biology and in elucidating cell signalling a cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to isolated polynucleotide (I) and CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in the combinate production of (II). The CC in for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as in the color of the sexpressing (II). (I) and (II) are useful in medical considered involving aberrant protein expression or biological activity. CC diagnostics forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed considered in the printed considered in electronic format directly from WIPO at the format directly from WIPO.
                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
              polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement (II) and its binding partners.
                                                                                                                                          The invention relates to isolated polynucleotide (I) and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and checkling cell signalling and insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel human diagnostic protein #11075
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ABG11084;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   18-FEB-2002

(I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and animo acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves have use as antibacterial agents. The polynucleotides of the invention may also be used in gene therapy protocols.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

                                                                                                                                                                                                                                                                         capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

                                                                                                                         Matches
                                                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                              isolated regulatory element from the nucleic acid sequences and a plant cell or seed transformed with the nucleic acid. An isolated regulatory element from these nucleotide molecules is useful for expressing an exogenous gene in plant cells. The nucleotide sequences of the invention and vectors containing these sequences are useful for expressing an plast and are useful as a molecular genetic marker for gualitative trait loci (QTL) tagging, QTL mapping, DNA fingerprinting and in marker assisted selection, in forage and turf grass improvement, e.g. tagging QTLs for dry matter digestibility, herbage quality, regrowth after cutting and grazing, cold tolerance, tiller survival and plant persistence. The present sequence represents the perennial ryegrass 4-coumarate Co-A-ligase 1 (LP4CL1) protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention represents purified or isolated nucleic acid and protein sequences of enzymes involved in lignin biosynthesis. The enzymes of the invention are 4 coumarate CoA-ligase (4CL), cinnamoyl-CoA reductase (CCR) and cinnamyl alcohol dehydrogenase (CDA) from a ryegrass (Lolium sp.) or fescue (Festuca sp.). The invention also comprises an invention are constructed to the construction of the comprises and comprises and comprise construction of the comprise construction of
                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 13; Fig 2; 148pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel nucleic acid encoding enzymes involved in lignin biosynthetic pathway from ryegrass or fescue species useful for modifying lignin biosynthesis in plants and as a molecular genetic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Perennial ryegrass; lignin; 4 commarate CoA-ligase; QTL; lignin biosynthesis; enzyme; cinnamoyl-CoA reductase; CCR; cinnamyl alcohol dehydrogenase; CAD; molecular genetic marker; qualitative trait loci; tagging; QTL mapping; DNA fingerprinting; marker assisted selection; forage improvement; turf grass improvement; dry matter digestibility; herbage quality; palatability; regrowth; cold tolerance; drought tolerance; tiller survival; plant persistence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Spangenberg GC,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      14-JUN-2000; 2000AU-0008154.

The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB73072).

Klumaze (rice). (I) has resistance against pyrimidinylcarboxy (PC)-based herbicides as well as acetolactic acid synthase activity. (I) can be used for providing plants with high resistance against PC-based herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1; Page 82-86; 96pp; Japanese

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             herbicides
         This invention relates to novel nucleic acid and protein sequences of mutant acetohydroxyacid synthase (AHS) enzymes that can be used to create herbicide resistance green plants. The encoded AHAS exhibits resistance to at least one herbicide as compared to the wild-type, and has a serine-asparagine substitution at amino acid 627. The sequences of the invention are useful creating herbicide resistance plants, by

                   resistance to at least one harbicide as compared to the wild-type, and has a serine-asparagine substitution at amino acid 627. The sequences of the invention are useful creating herbicide resistance plants, by planting these plants it is easier to control the growth of weeds in the vicinity of a plant by applying a herbicide which normally inhibits AHAS. The sequences can be used for producing rice plants having resistance to at least one herbicide which normally inhibits AHAS in the wild-type plant, such herbicides may be particularly imidazolinone or sulphonylurea herbicides. The production of plant having resistance to AHAS inhibiting herbicide allows the development of new herbicides which harbicides may be particularly included the herbicides which herbicides of the production of grant having resistance to AHAS inhibiting herbicide allows the development of new herbicides which harget AHAS, reducing the risk of weeds becoming resistant. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  vicinity of a plant by applying a herbicide which normally inhibits AHAS. The sequences can be used for producing rice plants having resistance to at least one herbicide which normally inhibits AHAS in the wild-type plant, such herbicides may be particularly inidazolinone or sulphonylurea herbicides. The production of plant having resistance to AHAS inhibiting herbicide allows the development of new herbicides which target AHAS, reducing the risk of weeds becoming resistant. The present sequence represents the wild type protein sequence of the rice AHS.
                                                                                                                                                                                                                                                                  This invention relates to novel nucleic acid and protein sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL101676-ABL30511), expressed DNA sequences (ABL101840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL0.1840-ABL16175), and the encoded proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                       responder cells that express TCR with a MHC ligand which stimulates the cells, and a test cpd.; (b) monitoring a signal produced by the cell when the TcR and MHC peptide ligand interact; and (c) comparing this signal with a control signal from a similar system lacking the test cpd. The specific inhibitors are potentially useful for blocking T-cells that cause autoimmune diseases (e.g. diabetes, rheumatoid arthritis, Grave's disease etc.), organ transplant rejection or other T cell mediated conditions. The interaction between a specific MHC peptide incard and a more credition in the condition of the periods in the condition of t
expressed on the surface of a basophil cell line.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Specific inhibitors of interaction between T cell receptor and MHC peptide ligand - identified by incubating receptor expressing cells with ligand and test cpd., and measuring change in interaction to detect cpds. potentially useful for blocking disease related T cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      primer; PCR; polymerase chain reaction; specific inhibitor;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                Novel specific inhibitors of the interaction between a T-cell receptor (TCR) and a MHC peptide ligand, are identified by: (a) incubating responder cells that express TCR with a MHC ligand which stimulates the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Barouch DH,
                     ligand and a TCR was studied using purified MHC-single peptide complexes (e.g. AAW04633-37) and an antigen specific TCR-zeta chimeric receptor
                                                                                                                                                                                                                                                                                                                                                                                                           Example -; Page 3; 21pp;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A peptide of 7-30 amino acids capable of binding to a murine MHC class II mol. (i.e. AAR84018-47) covalently linked to 1-3 hapten mols. can be used for treating contact sensitivity, or desensitising a mammal to a contact allergen (e.g. urushiol of poison ivy/oak). The peptide-hapten cpds. disrupt the normal proliferation of hapten-specific T cells, or alter the T cell mediated delayed-type hypersensitivity response to the hapten,

                                                                                                                                                                                     CC anchoring protein 79 (ARAP79). ARAP79 (see AAM05264 for wild type CC residues 37-50) is responsible for anchoring cAMP-dependent protein kinase CC (PKA) to specific intracellular sites. ARAP79 is predominantly present CC in postsynaptic densitles in the human forebrain. The pathways that CC in many cell functions, including the transcriptional activation of the context of the
                                                                                Matches

```
CC The present sequence is a mutant peptide derived from A-kinase anchor CC protein 79 (ARAP 79). It is expressed as a poly-histidine tag fusion CC protein 79 (ARAP 79). It is expressed as a poly-histidine tag fusion CC protein and can thus be purified to homogeneity by nickel affinity CC can calcineurin and so co-localises a kinase and a phosphatase that CC may regulate flux through a specific signalling pathway. Calcineurin is a CC2+/calmodulin-dependent protein phosphatase which is involved in many CC intracellular signalling pathways. It participates in regulation of IL-2 C expression following T cell stimulation in T cells. Calcineurin-binding CC peptides derived from AKAP 79 may be used to inhibit calcineurin activity CC in a cell. The peptides are useful for treating graft rejection following CC organ transplantation and for treating T cell-mediated disorders. CC Calcineurin deletion mutants which bind AKAP 79 are useful for defining CC an AKAP 79 binding site, for stimulating the immune response, stimulating cativated T cells for selected clonal expansion, or for enhancing T cell responses to experimental stimul for evaluation of early events in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAB14909
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 32

                                                                                                                                                                                                                                                                         A peptide of 7-30 amino acids capable of binding to a murine MHC class II mol. (i.e. AAR84018-47) covalently linked to 1-3 hapten mols. can be used for treating contact sensitivity, or desensitising a mammal to a contact allergen (e.g. urushiol of poison ivy/oak). The peptide-hapten cpds. disrupt the normal proliferation of hapten-specific T cells, or alter the T cell mediated delayed-type hypersensitivity response to the hapten, resulting in effective desensitisation to the hapten.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for eletermining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New spatially-addressable set of single exon nucleic acid probes, useful for measuring gene expression in sample derived from human breast, comprises number of single exon nucleic acid probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         09-AUG-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a spatially-addressable set of single

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               fetal liver. The present sequence is a peptide encoded by a succleic acid probe of the invention.

Note: The sequence data for this patent did not form part of printed specification, but was obtained in electronic format from WIFO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       03-AUG-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exor

They can be used to measure gene expression in brain cell samples which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one continued to the process of the present sequence is a protein encoded by one continued to the process of the present sequence is a protein encoded.

                                                                                                           The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  probes which are derived from genomic sequences expressed in the bone marrow. They can be used to measure gene expression in bone

                                                                                                                                                                         The present invention relates to single exon nucleic acid probes (SENP: see AA131315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAM26577 standard; Protein;

CC probes: Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a concleic acid expressed in the human lung; measuring gene expression in a CC sample derived from human lung; comparising the acriy with CC a collection of detectably labeled nucleic acids derived from human lung. Comprising (a) contacting the array with CC and collection of detectably labeled nucleic acids derived from human lung comprising (a) contacting the array with CC mRNA, and (b) measuring the label detectably bound to each probe of CC the array; identifying exons in a eukaryotic genome, comprising CC of the exharyote; and (b) detecting specific hybridisation of detectably CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, in the above mentioned microarray; assigning exons to a single exon probe, CC in the above mentioned microarray; assigning exons to a single gene, CC comprising (a) identifying exons from genomic sequence by the method CC above and (b) measuring the expression of each of the exons in several CC itssues and/or cell types using hybridisation to a single exon CC expression of the exons in the tissues and/or cell types indicates that the expression of the exons in the tissues and/or cell types indicates that CC expression analysis, and for identifying exons in a gene, particularly cush muman lung derived mRNA and for the study of lung diseases such as asthma, lung cancer, chronic obstructive pulmonary disease. CC Mieman-Pick disease, Hermansky-Pudlak syndrome, sarcoidosis, pulmonary fice haemosiderosis, pulmonary histocytosis. lymbhandioleiomyomtosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 04-FEB-2000; 2000US-180312P.
